# Sprint-2 Assignment

Assignment Statement

- Time to put your newly learned skills to work!

- To make a visual clock using only HTML, CSS & JavaScript

- Create a function whose argument is the time in 12 hour format (hh:mm:ss AM/PM).

- The clock can be a digital design or an analog design, it can be any design you want as long as it shows the correct time

- The page should be responsive.

Submit

- Students will push the solutions to their own public GitHub repos

- Publish your own website repo on Github

- Share your website link on LMS: 🔥 LMS Submit 🔥

Notes

- How to host a website on Github:

    - Github-Server

    - Publish and share your own website for free with GitHub

Happy Coding! 🔥
